

VCI2000®

ANTI-CORROSION

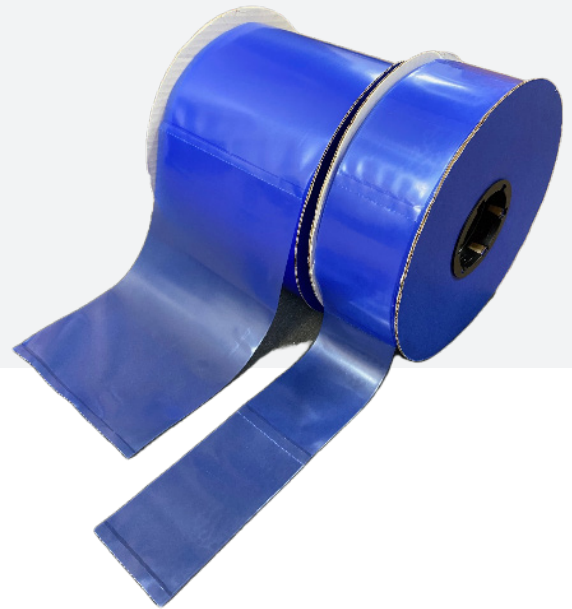

VCI PRE-OPENED BAGS

Designed to easily run on all automatic bagging machines that use Autobag style pre-opened bags on a roll. Each bag has an open end for easy insertion of the product, and a perforation between bags. Bags are automatically drawn from the roll, after which they are filled, sealed and removed from the roll along the perforations. Pre-opened, perforated bags are also available fan-folded in a box for easier loading and reduced changeover time.

LONG TERM CORROSION PROTECTION

The slow release vapor action protects the exterior as well as hard-to-reach interior surfaces. It is self-healing and will provide 24 months of long-term protection for storage and overseas shipments. Simply pack the metal object and seal the bag, The VCI on the film volatilizes and migrates with air then condenses on all metal surfaces, reaching all exposed and recessed areas.

FEATURES & BENEFITS

- Heat sealable
- Water resistant
- Reusable
- Transparent for easy inspection
- Eliminate cleaning after storage
- Recyclable
- Economical
- Complies to military specifications, MIL-PRF-22019 and MIL-PRF-22020
- Metal types it can protect are carbon steels, stainless steels, copper, brass, aluminum, silver, and galvanized steel

PRODUCT ATTRIBUTES

Product	Bag Width	Bag Length	Bag Thickness	Printing Capabilities
VCI Pre-Opened Bags on a Roll	2" - 25"	2" - 72"	2 - 6 mil	Up to 8 colors

MARKETS

- Automotive
- Aviation & Aerospace
- Electronics
- Export Packaging
- Military
- Oil & Gas

PRODUCT APPLICATIONS

- Automotive
- Spare parts
- Hardware
- Screws and Fasteners
- Bearings

VCI2000® also available in a variety of forms such as: VCI Bag, Zipper Bag, Gusset Bag, Heat Sealable Bag, Recloseable Bag, Anti-static Bag, Shrink Bag, Bubble Bag, Foam Bag, Wicketed Bags, Film and Custom Size Bags. VCI2000® Bags offers excellent protection for ferrous and non-ferrous metals.
