AC778

PREMIUM METALIZED SPLICING AND REPAIR TAPE

AC778 is an acrylic pressure-sensitive adhesive combined with the conformability of biaxially-oriented polypropylene (BOPP) film. A metalized film designed for splicing and repairing insulation, it provides superior sealing, protection benefits and ease of handling. It features a high shear aggressive adhesive, which is temperature resistant & flame retardant. Being a UV/temperature resistant acrylic adhesive combined with inorganic polypropylene film, it provides a long lasting closure system. The metallic color blends well with all metalized film and reflective insulations providing a nearly invisible seam.
